Print Student Care France (" mmar. " Supersymmetric Carlaboration with the Berkeley Drosophila Genome Project (BDGP). Determination of this BAC-end sequence was carried out as part of collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aarop Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial ECORI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's pand how to order individual BAC clones, the entire library and how to order individual BAC clones, the entire library and how to order individual BAC clones, the entire library. Determination of this BAC-end sequence was carried out as part of collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RECI-98 and was constructed by partial EcoRI digestion of prosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's pl and EST libraries. A more detailed description of the library, and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be location/Qualifiers

Public september of this BAC-end sequence was carried out as part of a collaboration of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP).
The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.frulfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoss in Pleter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain v2: cn bw sp, the same strain used for the BDGP's Pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

Determination of this BAC-end sequence was carried out as part of
collaboration with the Berkeley Drosophila Genome Project (BDGP).
NY. The library is named RPCI-98 and was constructed by partial EcorI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2: cn bw sp, the same strain used for the BDGP's p1 and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CNSONEVL 1101 bp DNA GSS 04-JUN-1999 Drosophila melanogaster genome survey sequence T7 end of BAC: BACR29B23 of RPCI-98 library from Drosophila melanogaster (fruit

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP brosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain v2: or bw sp, the same strain used for the BDGP's pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library or fillers for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

Petron of this BAC-end sequence was carried out as part of a collaboration of this BAC-end sequence was carried out as part of a collaboration of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutcyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial ECORI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; on bw sp, the same strain used for the BDGP's pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be location/Qualifiers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ij

Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk -. This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector
                                                                                                                                                                                                                                                                                                                                                                                                                                       Submitted (23-JUL-1999) Genoscope - Centre National de Sequencage BP 191 91006 EVRY cedex - FRANCE (E-mail : seqref@genoscope.cns.fr

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         /note—"Organ: tassel, kernal, silk, husk, root, leaf;
Vector: pGAD10; Site_1: EcoRI; cDNA library from fully
differentiated maize tissues from an active Mutator plant.
Tissue ratio is 4:2:1:1:1:1 (tassel, kernel, silk, husk,
root, leaf). Unidirectionally cloned. New library number
given to library 707 for additional sequencing."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ;

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kautucoyo Oscogawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's and how to order individual BAC clones, the entire library or filters for hybridization from the BACPAC Resource Center can be found at http://Dacpac.med.buffalo.edu/drosophila_bac.htm.

Submitted (12-APR-2000) to the EMBL/GenBank/DDBJ databases
This sequence is a single read and was generated as part of a large
scale clone-end sequencing project of the Tetraodon nigroviridis
genome. For more information, please take a look at
http://www.genoscope.cns.fr/Tetraodon.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                     This invention describes a novel protein (I) comprising identical or different catalytic domains of glycosyl transferases and which has processive activity (i.e. builds up oligosaccharide glycolipids by successive addition of glucose units). (I) can be used to produce 3-oligoglucosyl:1,2-diacylajveerols useful as food emulasifiers, polymer modifiers or detergents. This sequence represents a Bacillus subtilis glycosyl transferase catalytic domain which is used in the method of

synthase. MGGG is present in all plastids tested and is essential for cell survival, but is not present in other membrane structures, or in animal cells, and so represents a specific target. MGGG synthase or a plastid membrane isolated from plants is used to select and screen for specific inhibitors of MGDG synthase. These inhibitors are suitable as active agents against apicomplex parasites or as herbicides. The limbitors are used as antiparasitic agents, especially against plasmodium, Toxoplasma (particularly in patients with acquired immune deficiency syndrome) or Eimeria (coccidiosis in cattle or poultry), and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    67 rtknvlilmsdtggghrasaeairdafkiefgdkyrvivkdvwke-----ytgwpln 118
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   112 FP----TPVMSVLTEQFNINIPVATVMTDYR-LHKNWITPYSTRYYVATKETKQDFIDVG 166

                                                                                                                                                                                                                                                                     synthase. MCDG is present in all plastids tested and is essential for cell survival, but is not present in other membrane structures, or in animal cells, and so represents a specific target. MCDG synthase or a plastid membrane isolated from plants is used to select and screen for specific inhibitors of MCDG synthase. These inhibitors are suitable as active agents apicomplex parasites or as herbicides. The inhibitors are used as antiparasitic agents, especially against plasmodium, Toxoplasma (particularly in patients with acquired immune deficiency syndrome) or Eimeria (coccidiosis in cattle or poultry), and as herbicides.
                                                                                                                                                                                                                                                              present sequence represents a monogalactosyl-diacylglycerol (MGDG)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        13;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence represents a monogalactosyl-diacylglycerol (MGDG) synthase. MGDG is present in all plastids tested and is essential for cell survival, but is not present in other membrane structures, or in animal cells, and so represents a specific target. MGDG synthase or a plastid membrane isolated from plants is used to select and screen for specific inhibitors are suitable as active agents against apicomplex parasites or as herbicides. The inhibitors are used as antiparasitic agents, especially against plasmodium, Toxoplasma (particularly in patients with acquired immune deficiency syndrome) or Eimeria (coccidiosis in cattle or poultry), and as herbicides.

The present sequence represents a monogalactosyl-diacylglycerol (MGDG) synthase. MGDG is present in all plastids tested and is essential for cell survival, but is not present in other membrane structures, or in animal cells, and so represents a specific target. MGDG synthase or a plastid membrane isolated from plants is used to select and screen for specific inhibitors of MGDG synthase. These inhibitors are suitable as active agents against apicomplex parasites or as herbicides. The inhibitors are used as antiparasitic agents, especially against plasmodium, Toxoplasma (particularly in patients with acquired immune deficiency syndrome) or Eimeria (coccidiosis in cattle or poultry), and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              243 mghyplrilrgrgllekivfttvytdlstchptwfhklytrcycpsneyakratkaglgp 302

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      18;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This is the amino acid sequence of the protein encoded by the wbdM gene of a gene cluster (see AAX06748) involved in the biosynthesis of the Escherichia coli Olli O antigen. The protein shows high homology with TrsE of Yersinia enterocholitica, and is predicted to be a colitose or glucose transferase. The use of nucleic acid molecules derived from particular assembly and transport genes, particularly wbd (transferase), wax (flippase) and wzy (polymerase) genes, within O antigen gene clusters improves the specificity of methods for the detection and identification of O antigens, e.g. in testing food- or faccal-derived samples, or samples from patients. The O antigen is a major virulence factor of enteropathogenic E. coli strains that cause diarrhoea and haemorrhagic colitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence represents the stem peptide biosynthetic murg protein from Streptococcus pneumoniae. The murg protein can be used in the development of drugs for treating infections by antibiotic-resistant microorganisms. MurG inhibitory compounds are used to identify inhibitors which function by interfering with the stem peptide pathway in bacterial cell wall biosynthesis rather than with the peptidoglycan crosslinking step, which are useful for treating infections of
                                                                                                                                                                                                                                         Streptococcus pneumoniae; stem peptide biosynthesis; murg; inhibitor; infection; antibiotic resistant; microorganism; bacteria; cell wall biosynthesis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            56 ICKKWYINSFKYFRNMYKGFYYSRPDKLDKCFYKYYGLNKLINLLIKEKPDLI-----LL 110

```
Two human liver bilirubin UDP-glucuronosyltransferase cDNAs have been isolated. They are referred to as HUGB1 (AAQ27369) and HUGB12 (AAQ27370) (Ritter, et al., J. Biol. Chem. 266:1043-1047 (1991)) and, upon expression individually in COS-1 calls, encode isoforms that catalyse the formation of the two bilirubin monoglucuronides and

UDP-glucuronosyltransferase (00718) are a family of enzymes that catalyse the glucuronic acid conjugation of a wide range of endogenous and exogenous substrates. The UGT2B gene subfamily encode steroid metabolizing isoforms in the liver. Alteration of the expression or function of UGTS may effect drug metabolism. The invention relates to non-chromosomal nucleic acid molecules, which
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel human UDP-glucuronosyltransferase sequence, polymorphisms for genotyping individuals to predict rate of metabolism of substrates and for identifying potential drug interactions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              UDP-glucuronosyltransferase 2815; UGT2815; polymorphism; metabolism; drug interaction; detect; human; single nucleotide polymorphism; SNPs.

                                                                                                                                                                                                                                                24;
comprise human UGT2B sequence polymorphisms (see AAZ95051-Z95110). Probes which detect the UGT2B locus polymorphisms can be used to detect altered UGT2B metabolism of a substrate in an individual. The nucleic acid molecules comprising a human UGT2B sequence polymorphism can be used in sereening assays for genotyping individuals, also to predict their rate of metabolism of UGT2B substrate, potential drug-drug interactions and adverse side effects. The polymorphisms can be used as single nucleotide polymorphisms (SNRs) for detecting genetic linkage related to phenotypic variation in activity or expression of UGT2B protein. The polymorphism containing nucleic acid molecules may also be used for generating genetically modified non-human animals and for obtaining site specific gene modification in cell lines.

Defects or alterations in such a gene result in the accumulation of unstable repeated DNA sequences, a feature of a number of different cancers. The identification of a defect in the mismatch repair pathway can be diagnostic of a predisposition to cancer and prognostic for a particular mammalian cancer e.g colorectal, ovarian, endometrial (uterine), renal, bladder, skin, rectal and bowel. The nucleotide the account of the mismatch of the hMSH2 gene may also be used for

                                                                                                                                                                                                                                                                                                New cDNA from human MSH2 gene encoding DNA mismatch repair enzyme tis mutants causing hereditary non-polyposis colorectal cancer and derived proteins useful in cancer prevention or treatment and for diagnosis and screening.
                                                                                                                                                                                                                                                                                                                                                                                          cDNA from human colon cancer cells was amplified using primers previously used to isolate the yeast MSH2 gene from homology with Muts. The insert in isolated clone pNP-23 was used to screen cDNA libraries, and positive clones were used in a chromosome walking procedure to identify the entire coding sequence (given in AAQ87269) of the human MSH2 gene.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
